

HR Attrition Analysis Report

Executive Summary:

This report analyzes employee attrition using the IBM HR Analytics dataset. The goal is to identify who leaves, why they leave, and what factors drive attrition.

Key Findings:

- Overall attrition rate: 16.1%
- Overtime is the strongest predictor: 30.5% vs 10.4% (non-overtime)
- Highest-risk roles include Sales Representative (39.8%) and Laboratory Technician (23.9%)
- Leavers have lower income (average 4,787 vs 6,832) and are younger (33.6 vs 37.5)
- Frequent travellers show higher attrition (24.9%)
- Short relationships with managers show very high attrition (32.3% in Year 0)
- Long periods without promotion correlate with higher attrition (7–10 years)

Recommendations:

- Reduce overtime and balance workload
- Strengthen first-year manager relationship
- Review compensation for early-career employees
- Improve promotion transparency
- Reduce travel burden
- Targeted retention programs for Sales and Laboratory roles
